Schinnerer Announces a New Online E&O Application for Specialty Construction Consultants and Environmental Engineers and Consultants

Chevy Chase, MD – Victor O. Schinnerer & Company has simplified the application process for agents and insureds by combining the environmental and specialty construction consultant's applications. Clients in these programs often have intertwining responsibilities. Depending on the services offered and their target markets, it's often difficult to determine which application is appropriate. The new application allows underwriters to obtain the required information and streamlines the process for brokers.

This comprehensive application increases the likelihood that applications will be quoted quickly with less follow up. The new application also includes the appropriate fax approval questions to comply with FCC regulations.

The application applies to a large number of environmental and specialty construction firms including transportation consultants, testing labs, acoustical consultants, forensic consultants, geologists, hydrologists, telecommunications consultants, archaeologists, biologists, consulting engineering firms, soil scientists, ecologists, natural resource managers, wetland consultants and many others.

The application is available in several different formats, one of which is an online form. This online form allows brokers and/or their clients to complete and submit the application without the use of a printer or fax machine.

To access the application, go to:
